

Synthetic Industrial Safety Guideline

Synthetic demonstration document for SIH. Not real MRPL operational data.

General rule

Only trained and authorized personnel may operate or maintain industrial equipment.

Isolation

Before maintenance, follow the applicable isolation, lockout/tagout and permit procedures defined by the facility.

AI role

AI output is decision support. Safety-critical actions require verification against approved procedures and human authorization.

Confidentiality

Industrial documents and operational data should remain within the authorized on-premise environment.
